# White Noise, suspension
design Diesel Creative Team

New and imposing, the White Noise suspension lamp exalts light in a graphic contrast treatment inspired by a luminous galaxy in cosmic space. Its large black aluminium dome is sprayed by hand inside with a dense white varnish in a craft process which produces a material texture and a simultaneously decorative and functional effect when it reflects light. White Noise is the first lamp in the Diesel Living collection with a LED light and a board developed specially by Foscarini. A small perforated cap inside the diffuser - in a shape resembling a flying saucer - directs a strip of intense light downwards. At the same time the glow reflects within the dome diffuser and fades out at the edges light an evocative light explosion. With its dark-light and night-day, opaque diffuser and shiny dome interior finish contrasts, White Noise is perfect on a table and transports the room's atmosphere into a new galaxy.

White Noise, suspension
technical info

Description

Suspension lamp with downward lighting. The large diffuser is made from turned aluminium with a black liquid coating. The lamp's external coating has a special textured effect, whereas the interior has a matt finish. The reflective white colour on the inside of the dome is created by hand in three phases: the first gives a white shading effect, the second goes over it again with black in order to define the white area and the final stage involves a coarse dripping technique in white, increasing the casual effect of the colour. This technique makes every 'whitenoise' a unique piece that may slightly differ from the next. The lower diffuser, defining the beam of light, is made from polished white ABS with an extremely shiny, black liquid coating on the outside. The inside of the diffuser is therefore completely white in order to increase the reflection of light, and glossy black on the outside, creating a contrast with the matt surface of the large dome. The diesel logo is pad printed onto the outside of the diffuser. The Citizen COB at the centre of the dome is protected by a small diffuser made from satin-finish polycarbonate. The suspension cable is made from stainless steel and the electrical cable is covered with a black material casing. The ceiling rose has a galvanised metal bracket which houses the transformer and a glossy white cover made from batch-dyed ABS.

**Materials:** varnished aluminium and ABS

Colours: black

Brightness
direct down light

Diesel Creative Team

In 2009, Foscarini signed a partnership agreement with Diesel as part of the "Home Collection" home furnishings and lifestyle project. This partnership has given Foscarini the opportunity to make contact with a new target clientele and explore new lifestyles and furnishing trends through a collection conceived by Diesel for its own target group: "Diesel Living with Foscarini".

The Diesel Living with Foscarini collection speaks a range of different languages - from rock to pop, industrial to vintage, graphics to art - to illustrate the unmistakable Diesel lifestyle. Ironic, transgressive, eclectic, incandescent, the collection is made up of over 40 different lamp models. The collection is structured into a range of forms, materials and intended uses, lending itself to unexpected and unconventional settings, from domestic to public environments, always with a strong personality. The materials selected and researched for Foscarini, and perhaps even more so in the Diesel Living with Foscarini collection, are of the utmost importance. Materials which have never before been used in the lighting industry are the collection's added value.
